

## What is DealerVault?

DealerVault is a platform powered by Authenticom that supports data integration, formatting, and syndication to 3rd party vendor programs. Through a personal login, dealers are provided with complete transparency and control over the distribution of their DMS data.

Our easy-to-use interface features single-click feed activation, deactivation, and field customization. The consolidation of all connections to one point of access reduces the time commitment required to manage vendor feeds.

**Only one DMS integration needed for all 3rd-party solution providers**

**Secure data transfers protected by a \$20 million cyber liability insurance policy**

**Easy-to-use, cloud interface for administration of stores and users**

**Dealership control over data & vendor feeds to field level detail**

## Benefits

- Add, update and remove vendor data feeds with the click of a button
- Monitor all data feeds on an easy-to-use interface
- Quickly view reports to monitor and audit the movement of data at a granular level
- Control user access, manage vendors, and view reporting for multiple stores in a group

## Pricing

- Straightforward, no-charge-for-dealers pricing
- Low vendor costs
- No additional certification requirements means no hidden costs

## Technology

- Flexible structure allows for customizable data delivery
- Data integrations are quick with minimal dealer effort
- Developed in partnership with industry leading storage provider Microsoft Azure
- Secure, scalable and redundant cloud architecture

Partnering with DealerVault allows dealers to control the data syndication to solution providers with complete visibility. The platform also provides our clients with more services and benefits than they have come to expect from a traditional automotive data syndication provider.
